**INVESTMENT APPROACH** 

Our investment style is that of Growth at the Right Price (GARP). Our stock selection strategy focuses on companies with strong earnings growth, sustainable revenue streams and low borrowings, at reasonable price levels. By identifying companies that combine these features, we are able to achieve a secure balance between risk and growth. This meticulous, concentrated share selection process enables the Fund to be less correlated to the overall market.

#### THE FUND IS SUITABLE FOR INVESTORS WHO

- · have a high risk profile with a long-term investment

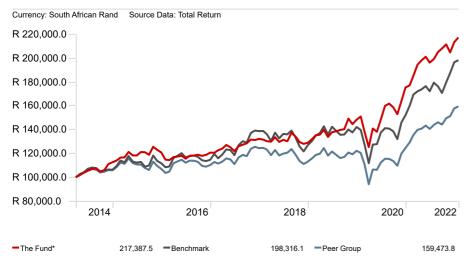

#### **FUND DESCRIPTION & OBJECTIVE**

The Fund's emphasis is on active stock selection and targets a 95% (minimum 90%) investment in South African growth assets.

The mandate is not restricted to any specific investment style. The investment strategy is underpinned by extensive quantitative and qualitative research. Our focus is predominantly on individual stock selection. However, macro-economic considerations such as interest rates and the performance of the South African Rand also play an integral part in constructing the Fund. The Fund's benchmark is the FTSE/JSE All Share Index (J203).

The Fund aims to provide investors with capital growth over the long term, and to achieve returns in excess of the FTSE/JSE All Share Index (J203), measured over 3 -5 year periods. The Manager does not make any guarantees concerning the capital or return of the Fund.

#### **UNIT PRICES & RELATED INFORMATION**

Unit trusts are traded at ruling prices and may engage in borrowing. Unit trusts are not normally taxed as traders but this cannot be guaranteed. Performance is calculated for the Fund: however. individual investor performance may differ as a result of initial fees (which we do not and have never charged), the actual investment date, the date of reinvestment and dividend withholdings tax. The Fund is valued each day at 15h00 and the cut-off time for submission of transactions is at 14h00. Prices are calculated and published on each business day in the prescribed manner, as well as on our website. Prices will also be made available on request.

#### **FUND SPECIFIC RISKS**

Unit trusts are not guaranteed investments. There are risks that are attached to investing, especially if an investor does not take into consideration the recommended time period to remain invested.

#### **FEES**

Introduced to enhance transparency for investors, the Total Expense Ratio (TER) is a standardised method of displaying charges against a portfolio. TER is calculated by taking into account particular expenses incurred by a fund as a percentage of the fund's net asset value (NAV). These expenses include the management fee that a manager charges, performance fees (if any) and other costs (e.g. fund's bank charges, audit fees, custodian and trustee fees). A higher TER does not necessarily imply a poor return, nor does a low TER imply a high return.

The Total Investor Charge (TIC) is the sum of the TER and transaction costs. Transaction costs are the costs incurred in trading (buying or selling) the underlying assets of a fund.

#### Therefore:

TER = Management Fee + Performance Fee (if any) + Other Costs (incl. VAT) TIC = TER + Transaction Costs (incl. VAT)

Performance fee of 0.1% for every 1% out-performance against the JSE All Share Index up to a maximum of 1% (ex VAT), calculated on a rolling 1 year basis. Performance fee is zero with negative returns.

#### **GLOSSARY**

- Annualised performance: the average return per year over the period.
- Maximum drawdown: the largest peak to trough decline during a specific period.
- Sortino ratio: measures the risk-adjusted return by taking the excess return over the risk-free rate divided by the downside deviation. It measures the "bad" volatility. A large Sortino ratio indicates there is a low probability of a large loss.
- Volatility: the amount by which the performance fluctuates over a given period.
- Risk profile: a measure of the volatility of the fund. A "low" rating indicates less volatility (lower end of the risk scale) with potentially lower returns (rewards). A "high" rating indicates more volatility (the upper end of the risk scale) with potentially higher returns (rewards).
